

Uber Eats in 5 minutes

**"Anything,
in minutes."**

From food delivery to the operating system for local commerce.

Uber Technologies, Inc.

Eating out and everyday shopping are still clunky

Local inventory and immediate demand simply aren't connected.

- Restaurants only serve who walks in — empty seats and waste are lost revenue.
- Consumers want "now, nearby" — but every store's ordering flow differs.
- Small local merchants lack the digital rails to capture nearby demand.

Linking supply and demand in minutes

Food delivery is the entry point to all of local commerce.

Demand

- 140M consumer base
- Stores online instantly

Capture demand beyond walk-ins

Delivery

- Driver network
- Owns the last mile

Stores need no fleet

Expansion

- Grocery, retail, alcohol
- Widen the shelf

Food is only the front door

Behaviour has shifted — irreversibly

The "will they use it" phase is over; the "is it profitable" phase has begun.

- Post-pandemic delivery demand stayed high and became everyday infrastructure.
- Operational efficiency flipped unit economics into profit.
- High-margin revenue (ads, Uber One) is now scaling.

Scale and profitability, at the same time

We have entered the phase of growing and earning at once.

140M

consumers ordered on
Uber Eats in 2024

\$20.1B

quarterly Delivery Gross
Bookings (Q4 2024,
+18%)

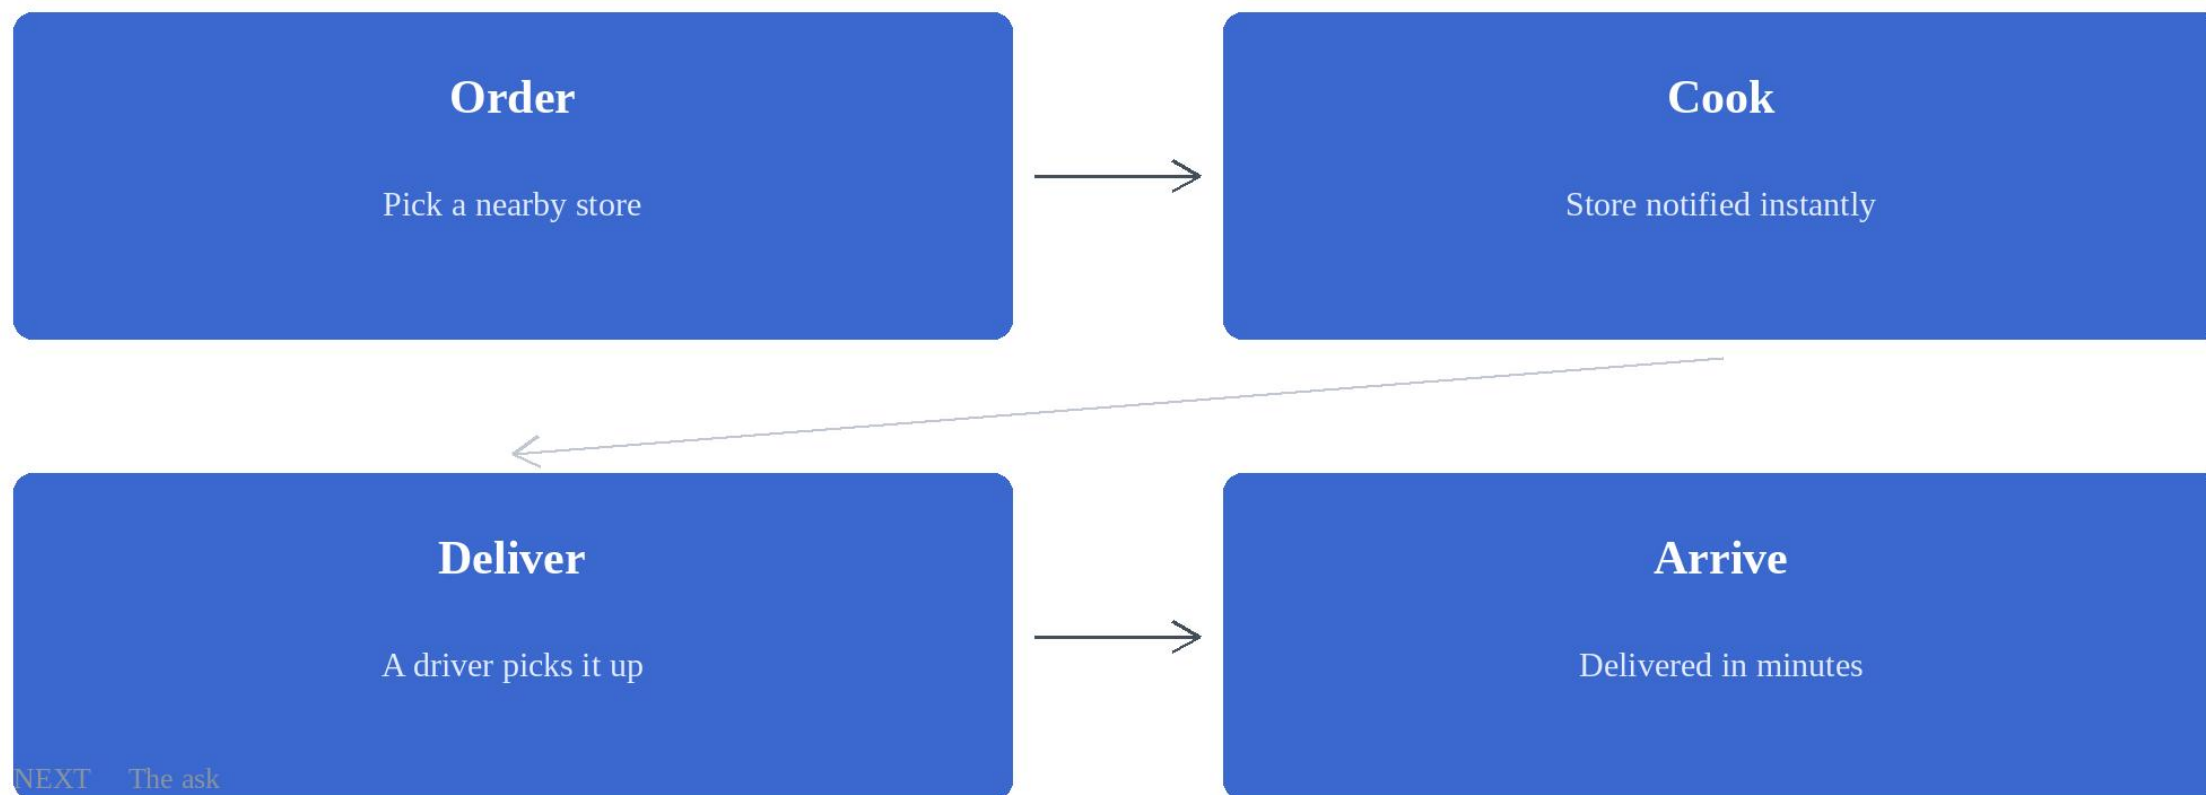

171M

monthly active consumers
across Uber

45

countries
(11,000+ cities)

From order to doorstep, in minutes

What we go after next

01

Widen the shelf

Expand grocery, retail and alcohol categories city by city.

02

Monetise at high margin

Scale advertising and Uber One to lift profitability.

03

Own local commerce

Control the rails: ordering, delivery and payments.
